

# Storm Alert

**WARM SEASON DAILY  
SAMPLE REPORT**

While the day will begin dry and workable, that will only last until the midday when periods of rain arrive. These will generally be light to moderate, but persistent enough to result in a washout through the second half of the day. Any lingering showers exit around sunset. Friday will be warmer and generally nice before a few showers / storms become possible mid to late afternoon. While not everywhere will see one, any storm can produce gusty winds and small hail along with brief downpours. Activity will end in the early evening, followed by a quiet weekend. Temps will rise through that time, with excessive heat building for Sunday and Monday with heat indices over 90 degrees.

HAZARD OVERVIEW			
Hazard	Thu	Fri - Sat	Description
Severe Weather	None	<b>Moderate</b>	While storms will be scattered Friday Afternoon, any can contain gusty winds of 40 - 60 mph and small hail.
Flooding	None	<b>Low</b>	Any storms Friday Afternoon can result in brief downpours and minor poor drainage / roadway flooding.

NEAR TERM FORECAST	
Precip Probability	 <p>The graph shows precipitation probability on the y-axis (0% to 100%) and time on the x-axis (6AM to 6AM). A green shaded area under a bell curve represents the probability, starting at 9AM, peaking at 100% at 3PM, and ending at 9PM.</p>
Thursday	Turning cloudy. Periods of rain arrive 11AM - 1PM, continue through the afternoon before dissipating to showers late. <b>0.10 - 0.20" of Rain</b> High 66 - 70   SW winds 5 - 10 mph
Thu Night	Any lingering shower exits around sunset, then partial clearing. Low near 65   Light / Variable winds < 5 mph
